

Test-4

LAN Communication

1) Explain use of Ping Command in H/W?

• Ping Command is used to check network connectivity b/w devices.

• It checks the destination device is reachable over a network.

2) Explain Netbios Protocol?

Netbios maps system names to IP address. It allows devices to communicate over a network.

3) Explain ^{SMB} Protocol?

SMB: Server Message Block is a network protocol for sharing files, folders and printers securely between computers.

4) Explain Ping Process From 50.0.0.10 to 50.0.0.20?

System 1 (50.0.0.10) Sends an ICMP Echo request to System 2, then

System 2 (50.0.0.20) replies with an ICMP Echo reply back to System 1. The Secondary Statistics are then used to evaluate the connection quality and packet loss.
